Over-the-Counter Markets

October 11, 2005

This paper lays out a theory of asset pricing and market making based on search and bargaining. We show how search-based inefficiencies affect prices through equilibrium allocations and through the effect of search on agents' bargaining positions, that is, their outside options based on their ability to trade with other investors or market makers.

The model that we present here can also be viewed as one of imperfect competition, for example, in specialist-based equity markets. In particular, the model shows that even a monopolistic market maker may have a tight bid-ask spread if investors can easily trade directly with each other. This resembles the situation at the New York Stock Exchange.

However, on Nasdaq, a "phone market" with several dealers for each stock, it can be difficult for investors to find each other directly. Before the reforms of 1994, 1995, and 1997, it was difficult for investors to compete with Nasdaq market makers through limit orders. This may help explain why spreads were higher on Nasdaq than on NYSE.

This document is not intended to, and does not relate specifically to any investment strategy or product that AQR offers. It is being provided merely to provide a framework to assist in the implementation of an investor's own analysis and an investor's own view on the topic discussed herein.

This document has been provided to you solely for information purposes and does not constitute an offer or solicitation of an offer or any advice or recommendation to purchase any securities or other financial instruments and may not be construed as such. The factual information set forth herein has been obtained or derived from sources believed by the author and AQR Capital Management, LLC ("AQR") to be reliable but it is not necessarily all-inclusive and is not guaranteed as to its accuracy and is not to be regarded as a representation or warranty, express or implied, as to the information's accuracy or completeness, nor should the attached information serve as the basis of any investment decision. This document is not to be reproduced or redistributed to any other person. The information set forth herein has been provided to you as secondary information and should not be the primary source for any investment or allocation decision. Past performance is not a guarantee of future performance. Diversification does not eliminate the risk of experiencing investment losses.

This material is not research and should not be treated as research. This paper does not represent valuation judgments with respect to any financial instrument, issuer, security or sector that may be described or referenced herein and does not represent a formal or official view of AQR. The views expressed reflect the current views as of the date hereof and neither the author nor AQR undertakes to advise you of any changes in the views expressed herein.

The information contained herein is only as current as of the date indicated, and may be superseded by subsequent market events or for other reasons.
