

Asset Allocation

The Credit Risk Premium

January 15, 2017

The Journal of Fixed Income

Despite theoretical and intuitive reasons for a credit risk premium to exist, past research has found little empirical evidence that it is, in fact, real. The authors of this paper argue that this is primarily due to biases in computing the credit excess returns; these biases improperly account for term risk.

Using data spanning 80 years in the U.S. and nearly 20 years in Europe, the authors of this paper find what they characterize as strong evidence of credit risk premium after correctly adjusting for term risk. The credit risk premium is not spanned by other known risk premia and exhibits time variation related to economic growth and aggregate default rates.

These results may have important implications for asset pricing and investment decisions.

This document is not intended to, and does not relate specifically to any investment strategy or product that AQR offers. It is being provided merely to provide a framework to assist in the implementation of an investor's own analysis and an investor's own view on the topic discussed herein.

This document has been provided to you solely for information purposes and does not constitute an offer or solicitation of an offer or any advice or recommendation to purchase any securities or other financial instruments and may not be construed as such. The factual information set forth herein has been obtained or derived from sources believed by the author and AQR Capital Management, LLC ("AQR") to be reliable but it is not necessarily all-inclusive and is not guaranteed as to its accuracy and is not to be regarded as a representation or warranty, express or implied, as to the information's accuracy or completeness, nor should the attached information serve as the basis of any investment decision. This document is not to be reproduced or redistributed to any other person. The information set forth herein has been provided to you as secondary information and should not be the primary source for any investment or allocation decision. Past performance is not a guarantee of future performance. Diversification does not eliminate the risk of experiencing investment losses.

This material is not research and should not be treated as research. This paper does not represent valuation judgments with respect to any financial instrument, issuer, security or sector that may be described or referenced herein and does not represent a formal or official view of AQR. The views expressed reflect the current views as of the date hereof and neither the author nor AQR undertakes to advise you of any changes in the views expressed herein.
